

TWO CALENDARS, ONE PAST

ACCEPTED CHRONOLOGY VS. THE FOMENKO-NOSOVSKY “NEW CHRONOLOGY” · A RIVEN READ

Written 10/5/2026. Every number is from the authors’ own PDFs or a museum, university or antiquities page. Where their printed numbers disagree with each other, both are shown. The page beats the summary.

SUBJECTS	MEDIAN MOVE	SHIFT FAMILIES	CH.6 EXAMPLES	NO OFFSET PRINTED
10	≈1,800y	3	20	4/20

1. THE SHORT VERSION

Fomenko and Nosovsky say most of “ancient” history is medieval history copied backward. I put ten of their cases on one axis, 3100 BCE to 2026 CE. **Blue** is the accepted date. **Orange** is theirs. Every gap is counted without a year 0.

Eight of the ten have a number. Their median move is **about 1,800 years later**. The biggest is the Great Pyramid: Khufu’s reign, c. 2589–2566 BCE, moved into a 14th–16th-century build era. That is +3,866 to +4,188 years. The smallest is Rome, Sulla to Caracalla, moved onto the Holy Roman Empire: +1,037 to +1,046 years. Egypt and Classical Greece don’t get a number. They are placed as whole eras inside the 11th–16th centuries.

SUBJECT	ACCEPTED	PROPOSED	MOVE (YRS)	3100 BCE → NOW
Pharaonic Egypt era vs era	c. 3100–30 BCE	11th–16th c. CE	no single offset	
Great Pyramid builder’s reign vs build era	Khufu, c. 2589– 2566 BCE	14th–16th c. CE	+3,866 to +4,188	
Senenmut ceiling artwork vs sky reading	c. 1473–1458 BCE	1007 CE	+2,464 to +2,479	
Seti I reign vs two zodiac readings	c. 1294–1279 BCE	969 or 1206 CE	+2,247...+2,499	
Round Dendera zodiac carved sky vs reading	50 BCE	20 Mar 1185 CE	+1,234	
Classical Greece era vs era	c. 480–323 BCE	11th–16th c. CE	no single offset	
Parthenon build vs build	447–432 BCE	late 14th c. CE	≈ +1,800	
Peloponnesian War war vs war	431–404 BCE	1374–1387 CE	+1,790 to +1,804	
Rome: Sulla → Caracalla dynasty vs prototype	82 BCE – 217 CE	962/965–1254 CE	+1,037 to +1,046	
Crucifixion event vs revised proposal	30 or 33 CE	1185 CE (birth 1152)	+1,152 to +1,155	

■ accepted ■ proposed

□ dashed = era · — bar = reign/war · ▨ hatched = construction · ◆ = date read from art · ● = one-year event

2. WHAT KIND OF DATE IT IS

The two columns don't always measure the same thing, and the chart keeps them apart.

- **A zodiac reading is a date, not a reign.** Seti I's 969 and 1206 CE are two answers to one horoscope. Neither is a period he ruled.
- **A reign isn't a build date.** Khufu's reign is set against their era for *large pyramids*, 14th–16th c. Chron4 ch.20 also says "X–XI century the earliest," with some "as late as the XVII."
- **An era isn't a shift.** Egypt, c. 3100–30 BCE, is about 3,070 years long. They fit it inside about 600, so there is no single offset.
- **The crucifixion date moved twice.** Chron4 ch.20 says 1095. Their later revision (Tsar of the Slavs, 2004) says birth 1152 and crucifixion 1185. This sheet uses the revision and flags the older one.

3. HOW THE SHIFTS WORK

There are three offset families. Each one is a **different distance from the same origin**. You don't add them. Chron1 ch.6 §7 says it plainly: "All the three shifts are counted off the same point."

Right: copy = original – 333/360, or – 1,053, or – 1,778...1,810. Chron2 ch.3 names them the Roman–Byzantine, Roman and Graeco-Biblical shifts.

Wrong: $333 + 1,053 + 1,778 = 3,164$. Nobody proposes that number. There is also **no universal 600-year correction** anywhere in the sources.

Gaps measured between two copies, not from the origin, can equal a difference or a sum. Fig. 6.20 labels Example 6 "720 = 1053 – 333." Table 2 calls Example 2's $\approx 1,300$ "the sum of two basic shifts."

4. THE 20 DUPLICATE DYNASTIES, AS PRINTED

These are Chron1 ch.6, Examples 1–20. Shifts are copied from the text, tables, captions and figure notes. 8 examples print numbers that disagree with each other. 4 print no fixed offset at all.

#	DYNASTY A	DYNASTY B	SHIFT AS PRINTED	
1	Second Roman Empire 82 BC–217 AD	Third Roman Empire 270–526	$\approx 333 \cdot \text{caption } \approx 330\text{--}360$	DISAGREES
2	Israel kings 922–724 BC	Third Roman Empire 300–476	$\approx 1,300$ (“sum of ≈ 1000 and 300”)	
3	Judah kings 928–587 BC	Eastern Roman Empire 300–552	none printed	NO OFFSET
4	Popes 140–314	Popes 324–532	none printed	NO OFFSET
5	Carolingians 681–887 (captions: 888)	Eastern Roman Empire 324–527	$\approx 360 \cdot \text{mean } 359.6$	DISAGREES
6	Holy Roman Empire 983–1266	Roman Empire 270–553	$\approx 720 = 1053 - 333 \cdot \text{mean } 723$	
7	Holy Roman Empire 911–1254	Habsburgs 1273–1637	$\approx 362 \cdot \approx 360 \cdot \text{mean } 373$	DISAGREES
8	Holy Roman Empire 936–1273	Second Roman Empire 82 BC–217 AD	$\approx 1,053 \cdot \text{mean } 1,039$	
9	Judah kings 928–587 BC	Holy Roman Empire 911–1307	$\approx 1,830 \cdot 1,839$ (math: 1,838)	DISAGREES
10	Israel kings 922–724 BC	Roman coronations 920–1170	$\approx 1,840 \cdot “920 + 922 = 1842”$	DISAGREES
11	Russian czar-khans 1276–1600	Habsburgs 1273–1600	0 – “no shift”	
12	Armenian Catholicoses (from 970)	Holy Roman Empire + Judah	60 (math: 59) $\cdot 1,839$	DISAGREES
13	Byzantium I 527–829	Byzantium II 829–1204	≈ 340	
14	Byzantium II 867–1143	Byzantium III 1204–1453	≈ 330 (Byz II range $\neq$ Ex. 13)	DISAGREES
15	Russia 945–1174	Russia 1363–1598	410	
16	“Ancient” Greece 510–300 BC	Medieval Greece 1250–1460	$\approx 1,810$	
17	England 640–1330	Byzantium 380–1453	text 210–270 $\cdot$ fig. $\approx 275 / \approx 120$	DISAGREES
18	Greek kings $\cdot$ Lacedaemon	Byzantium $\cdot$ Mistras	none printed (fig. typo “330–397”)	NO OFFSET
19	Regal Rome of Livy	Third Roman Empire 300–552	$\approx 1,050$	
20	Regal Rome of Livy	Holy Roman Empire + Byzantium	none printed	NO OFFSET

5. WHERE THE PAGES DISAGREE WITH THEMSELVES

- Ex. 1: the text says ≈ 333 and the caption says $\approx 330\text{--}360$.
- Ex. 7 has three numbers for one pair: ≈ 362 in the text, ≈ 360 in the captions, and a mean reign-end shift of 373.
- Ex. 9: “911 AD = 928 BC ... 1839.” Counted without a year 0, that is 1,838. Fig. 6.26 says $\approx 1,830$.
- Ex. 12: “970 AD = 911 AD ... 60 year shift.” The difference is 59.
- Ex. 17: the text gives 210–270 forward. Fig. 6.47 prints ≈ 275 .
- Parthenon: “447 b.c. ... shift of 1810 years ... 1363 a.d.” With no year 0, the arithmetic gives 1364.
- Ex. 5 ends in 887 in the text and 888 in the captions. Byzantium II is 829–1204 in Ex. 13 and 867–1143 in Ex. 14.
- Fig. 6.50 prints one Spartan reign as “330–397” BC.
- No offset is printed for Examples 3, 4, 18 and 20.

6. WHAT THIS SHEET IS NOT

- It is not a redated list of every pharaoh. Egypt is shown as one era.
- It applies no universal correction. None exists in the sources.
- It doesn't endorse the claim. Historians, Egyptologists and astronomers reject the New Chronology. This sheet only reports it accurately.

SOURCES

Proposed — Fomenko & Nosovsky, <i>History: Fiction or Science?</i>	Accepted
Chron1 ch.6, pp. 256–325: Examples 1–20, Tables 1–11, Figs 6.11–6.57, §7.	The Met: Egyptian chronology; Classical Greece ca. 480–323 B.C.; Senenmut ceiling (TT353).
Chron2 ch.3 §§14–15: the 1374–1387 war, the Parthenon, the shift families.	Harvard Giza Project: Khufu, builder of the Great Pyramid.
Chron3 ch.19: zodiac datings (Dendera 1185, Seti I 969/1206, Senenmut 1007).	Egyptian Ministry of Tourism & Antiquities: Tomb of Sety I (KV17).
Chron4 ch.20: Egypt after 900 AD, pyramids XIV–XVI c., crucifixion 1095.	Louvre D 38: Dendera zodiac (Cauville & Aubourg, mid-50 BC sky).
<i>Tsar of the Slavs</i> (2004): birth 1152, crucifixion 1185.	Columbia Art Humanities: Parthenon 447–432 BC.
